Test Comments: *Large amounts of rainfall after planting really hurt this test. Plant stand reduction, non-uniform plant height and yellow corn was evident during stand counting late June. Weed control was poor at that time (too wet to spray herbicide). The surrounding field, planted ten days ahead of the test, was in better shape. Test was not harvested knowing yield results would be of poor quality.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD (0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
